January 28, 2005

I am Kathryn O'Connor Burroughs, DC.

I have had a private Chiropractic practice for 11 years.

I have been treating patients with NeuroModulation Technique (NMT) as taught in the seminars for problems such as allergies, infectious agents, sensory/motor issues (ie: numbness and tingling).

NMT is taught by the use of an NMT seminar manual. The system of NMT works as disclosed in the seminar manual.

NMT is useful in treating patients with difficult or resistant to treatment symptoms.

I have had many interesting cases of which I will highlight three:

A woman with fibroid tumors expelled 3 of them for two days following an NMT treatment. A large one and two smaller ones.

A woman with numbness and tingling in her hands with fingers which were also badly disfigured from Rheumatoid Arthritis has over the course of treatment had the numbness and tingling completely remiss. Her arthritic nodules are 2/3's improved and still changing for the better.

A woman with anaphylactic reaction to peppers of several kinds (red, green and cayenne) Is now able to eat these foods symptom free.

Sincerely Yours,

Kathryn O'Connor Burroughs, DC
